

2022 Cost & Manufacturing Event – Real Case Scenario

Over the last year, the world has changed drastically and companies are dealing with disrupted supply chains (material and component availability) and strong increases in cost drivers such as raw materials, logistics and energy.

We request you to prepare an overview of the impact of this on the suspension system of your car and the differences between the start of the project and the current status for at least the following topics using real world figures:

- *Cost*
- *Availability of materials*
- *Project timing*

We are curious to see how you have managed to cope with these difficulties and the decision process you went through.

Please prepare yourselves for a 10 minute presentation at the event in any format (digital or analog) you prefer. Demonstrate your thinking, selection criteria for tough subjects and the decision taken with the expected impact of the different decisions.
