

FSN 2025 – Technical Directive Transponder Placement

Transponders, holders and clips are provided by the event organization.

Holder & Clip: https://speedhiveshop.mylaps.com/catalog/product/view/id/158/s/holder_clip/category/9/

All transponders must be placed:

- in front of the wheel from side view
- As low as possible
- In line of sight
- EV Class: Not near HV systems to avoid EMC issues

For cars with wings, the endplate is an excellent location. **Loss of the transponder due to incorrect fixing or collision with a cone is the team's responsibility.** Use of double sided tape is strongly discouraged.

Please note that the start and finish at acceleration is measured by laser: the transponder location does not affect the runtime.
